JEE Advanced (2022)

PAPER-I

Physics

SECTION 1

- This section contains **EIGHT (08)** questions.
- The answer to each question is a **NUMERICAL VALUE**.
- For each question, enter the correct numerical value of the answer using the mouse and the on-screen virtual numeric keypad in the place designated to enter the answer. If the numerical value has more than two decimal places, **truncate/round-off** the value to **TWO** decimal places.
- Answer to each question will be evaluated according to the following marking scheme:

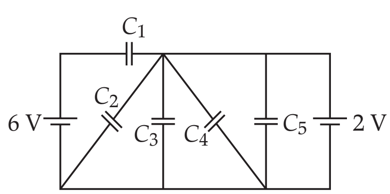
Full Marks : +3 ONLY if the correct numerical value is entered;

Zero Marks : 0 In all other cases.

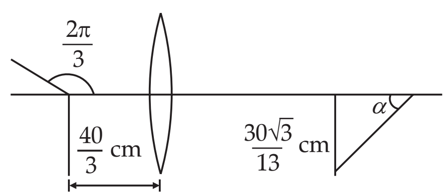
Q 1. Two spherical stars A and B have densities ρ_A and ρ_B, respectively. A and B have the same radius, and their masses M_A and M_B are related by $M_B = 2M_A$. Due to an interaction process, star A loses some of its mass, so that its radius is halved, while its spherical shape is retained, and its density remains ρ_A. The entire mass lost by A is deposited as a thick spherical shell on B with the density of the shell being ρ_A. If v_A and v_B are the escape velocities from A and B after the interaction process, the ratio $\frac{v_B}{v_A} = \sqrt{\frac{10n}{15^{1/3}}}$. The value of n is ....

Q 2. The minimum kinetic energy needed by an alpha particle to cause the nuclear reaction ${}^{16}_{7}N + {}^{4}_{2}He \rightarrow {}^{1}_{1}H + {}^{19}_{8}O$ in a laboratory frame is n (in MeV). Assume that ${}^{16}_{7}N$ is at rest in the laboratory frame. The masses of ${}^{16}_{7}N$, ${}^{4}_{2}H$, ${}^{1}_{1}H$ and ${}^{19}_{8}O$ can be taken to be 16.006 u, 4.003 u, 1.008 u and 19.003 u, respectively, where 1 u = 930 MeV c^{-2}. The value of n is ......

Q 3. In the following circuit $C_1 = 12\,\mu F$, $C_2 = C_3 = 4\,\mu F$ and $C_4 = C_5 = 2\,\mu F$. The charge stored in C_3 is .... μC.

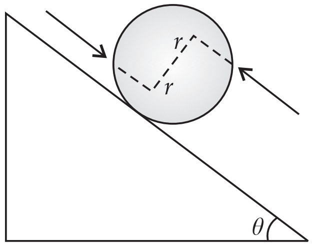


Q 4. A rod of length 2 cm makes an angle $\frac{2\pi}{3}$ rad with the principal axis of a thin convex lens. The lens has a focal length of 10 cm and is placed at a distance of $\frac{40}{3}$ cm from the object as shown in the figure. The height of the image is $\frac{20\sqrt{3}}{13}$ cm and the angle made by it with respect ot the principal axix is α rad. The value of α is $\frac{\pi}{n}$ rad, where n is ....



Q 5. At time $t = 0$, a disk of radius 1 m starts to roll without slipping on a horizontal plane with an angular acceleration of $\alpha = \frac{2}{3}$ rad s^{-2}. A smal stone is stuck to the disk. At $t = 0$, it is at the contact point of the disk and the plane. Later, at time $t = \sqrt{\pi}$ s, the stone detaches itself and flies off tangentially from the disk. The maximum height (in m) reached by the stone measured from the plane is $\frac{1}{2} + \frac{x}{10}$. The value of x is .... [Take $g = 10$ ms^{-2}.]

Q 6. A solid sphere of mass 1 kg and radius 1 m rolls without slipping on a fixed inclined plane with an angle of inclination $\theta = 30°$ from the horizontal. Two forces of magnitude 1 N each, parallel to the incline, act on the sphere, both at distance $r = 0.5$ m from the centre of the sphere, as shown in the figure. The acceleration of the sphere down the plane is .... ms^{-2}. (Take $g = 10$ ms^{-2}.)



Q 7. Consider an LC circuit, with inductance L = 0.1 H and capacitance C = 10^{-3} F, kept on a plane. The area of the circuit is 1 m^2. It is placed in a constant magnetic field of strength B_0 which is perpendicular to the plane of the circuit. At time t = 0, the magnetic field strength starts increasing lineraly as $B = B_0 + \beta t$ with $\beta = 0.04\ Ts^{-1}$. The maximum magnitude of the current in the circuit is .... mA.

Q 8. A projectile is fired from horizontal ground with speed v and projection angle θ. When the acceleration due to gravity is g, the range of the projectile is d. If at the highest point in its trajectory, the projectile enters a different region where the effective acceleration due to gravity is $g' = \frac{g}{0.81}$, then the new range is $d' = nd$. the value of n is ....

SECTION 2

- This section contains **SIX (06)** questions.
- The question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is (are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme:

Full Marks	:	+4	**ONLY** if (all) the correct option(s) is (are) chosen;
Partial Marks	:	+3	If all the four options are correct but **ONLY** three options are chosen;
Partial Marks	:	+2	If three or more options are correct but **ONLY** two options are chosen, both of which are correct;
Partial Marks	:	+1	If two or more options are correct but **ONLY** one option is chosen and it is a correct option;
Zero Marks	:	0	If none of the options is chosen (i.e., the question is unanswered);
Negative Marks	:	–2	In all other cases.

Q 9. A medium having dielectric constant K > 1 fills the space between the plates of a parallel plate capacitor. The plates have large area, and the distance between them is d. The capacitor is connected to a battery of voltage V, as shown in Figure (a). Now, both the plates are moved by a distance of $\frac{d}{2}$ from their original positions, as shown in Figure (b).

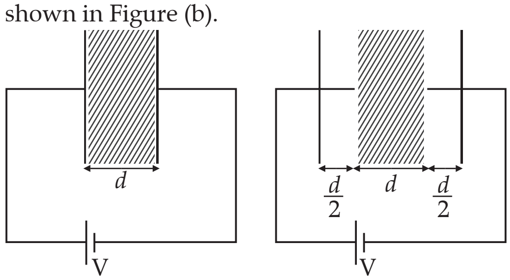


Figure (a) **Figure (b)**

In the process of going from the configuration depicted in Figure (a) to that in Figure (b), which of the following statement(s) is (are) correct ?

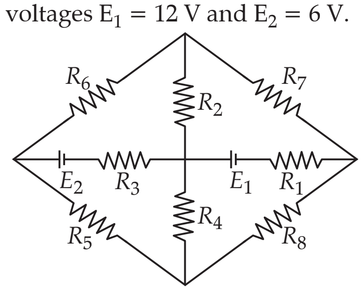
(A) The electric field inside the dielectric material is reduced by a factor of 2K.

(B) The capacitance is decreased by a factor of $\frac{1}{K+1}$.

(C) The voltage between the capacitor plates is increased by a factor of (K + 1).

(D) The work done in the process **DOES NOT** depend on the presence of the dielectric material.

Q 10. The figure shows a circuit having eight resistances of 1 Ω each, labelled R_1 to R_8, and two ideal batteries with voltages E_1 = 12 V and E_2 = 6 V.



Which of the following statement(s) is (are) correct?

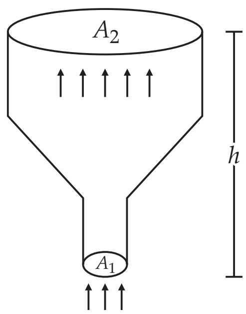
(A) The magnitude of current flowing through R_1 is 7.2 A.

(B) The magnitude of current flowing through R_2 is 1.2 A.

(C) The magnitude of current flowing through R_3 is 4.8 A.

(D) The magnitude of current flowing through R_5 is 4.8 A.

Q 11. An ideal gas of density $\rho = 0.2$ kg m^{-3} enters a chimney of height h at the rate of $\alpha = 0.8$ kg s^{-1} from its lower end, and escapes through the upper end as shown in the figure. The cross-sectional area of the lower end is $A_1 = 0.1$ m^2 and the upper end is $A_2 = 0.4$ m^2. The pressure and the temperature of the gas at the lower end are 600 Pa and 300 K, respectively, while its temperature at the upper end is 150 K. The chimney is heat insulated so that the gas undergoes adiabatic expansion. Take $g = 10$ ms^{-2} and the ratio of specific heats of the gas $\gamma = 2$. Ignore atmospheric pressure.



Which of the following statement(s) is (are) correct?

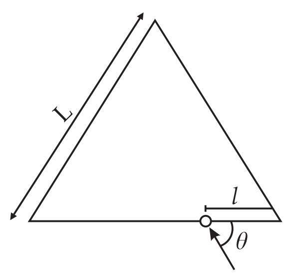
(A) The pressure of the gas at the upper end of the chimney is 300 P*a*.

(B) The velocity of the gas at the lower end of the chimney is 40 ms^{-1} and at the upper end is 20 ms^{-1}.

(C) The height of the chimney is 590 m.

(D) The density of the gas at the upper end is 0.05 kg m^{-3}.

Q 12. Three plane mirrors form an equilateral triangle with each side of length L. There is a small hole at a distance $l > 0$ from one of the corners as shown in the figure. A ray of light is passed through the hole at an angle θ and can only come out through the same hole. The cross section of the mirror configuration and the ray of light lie on the same plane.



Which of the following statement(s) is (are) correct?

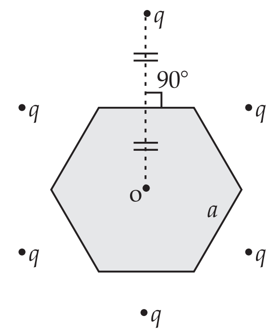
(A) The ray of light will come out for $\theta = 30°$, for $0 < l < L$.

(B) There is an angle for $l = \dfrac{L}{2}$ at which the ray of light will come out after two reflections.

(C) The ray of light will **NEVER** come out for $\theta = 60°$, and $l = \dfrac{L}{3}$.

(D) The ray of light will come out for $\theta = 60°$, and $0 < l < \dfrac{L}{2}$ after six reflections.

Q 13. Six charges are placed around a regular hexagon of side length a as shown in the figure. Five of them have charge q, and the remaining one has charge x. The perpendicular from each charge to the nearest hexagon side passes through the centre O of the hexagon and is bisected by the side.



Which of the following statement(s) is (are) correct in SI units ?

(A) When $x = q$, the magnitude of the electric field at O is zero

(B) When $x = -q$, the magnitude of the electric field at O is $\dfrac{q}{6\pi\varepsilon_0 a^2}$.

(C) When $x = 2q$, the potential at O is $\dfrac{7q}{4\sqrt{3}\pi\varepsilon_0 a}$.

(D) When $x = 3q$, the potential at O is $-\dfrac{3q}{4\sqrt{3}\pi\varepsilon_0 a}$.

Q 14. The binding energy of nucleons in a nucleus can be a affected by the pair-wise Coulomb repulsion. Assume that all nucleons are uniformly distributed inside the nucleus. Let the binding energy of a proton be E_b^p and the binding energy of a neutron be E_b^n in the nucleus.

Which of the following statement(s) is (are) correct?

(A) $E_b^p - E_b^n$ is proportional to $Z(Z-1)$ where Z is the atomic number of the nucleus.

(B) $E_b^p - E_b^n$ is proportional to $A^{-\frac{1}{3}}$ where A is the mass number of the nucleus.

(C) $E_b^p - E_b^n$ is positive.

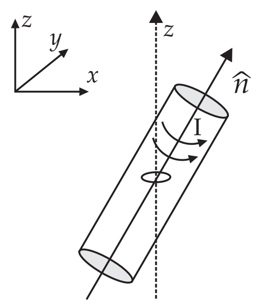
(D) E_b^p increases if the nucleus undergoes a beta decay emitting a positron.

SECTION 3

- This section contains **FOUR (04)** Matching List Sets.
- Each set has **ONE** Multiple Choice Question.
- Each set has **TWO** list : **List-I** and **List-II.**
- **List-I** has **Four** entries (I), (III) and (IV) and **List-II** has **Five** entries (P), (Q), (R), (S) and (T).
- **FOUR** options are given in each Multiple Choice Question based on **List-I** and **List-II** and **ONLY ONE** of these four options satisfies the condition asked in the Multiple Choice Question.
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks	:	+3	**ONLY** is the option corresponding to the correct combination is chosen;
Zero Marks	:	0	If none of the options is chosen (i.e., the question is unanswered);
Negative Marks	:	–1	In all other cases.

Q 15. A small circular loop of area A and resistance R is fixed on a horizontal *xy*-plane with the centre of the loop always on the axis $\hat{n}$ of a long solenoid. The solenoid has m turns per unit length and carries current I counter-clockwise as shown in the figure. The magnetic field due to the solenoid is in $\hat{n}$ direction. List-I gives time dependences of $\hat{n}$ in terms of a constant angular frequency ω. List-II gives the torques experienced by the circular loop at time $t = \frac{\pi}{6\omega}$. Let $\alpha = \frac{A^2\mu_0^2 m^2 I^2 \omega}{2R}$.



List-I	List-II
(I) $\frac{1}{\sqrt{2}}\left(\sin\omega t\hat{j} + \cos\omega t\hat{k}\right)$	(P) 0
(II) $\frac{1}{\sqrt{2}}\left(\sin\omega t\hat{i} + \cos\omega t\hat{j}\right)$	(Q) $-\frac{\alpha}{4}\hat{i}$
(III) $\frac{1}{\sqrt{2}}\left(\sin\omega t\hat{i} + \cos\omega t\hat{k}\right)$	(R) $\frac{3\alpha}{4}\hat{i}$
(IV) $\frac{1}{\sqrt{2}}\left(\sin\omega t\hat{j} + \cos\omega t\hat{k}\right)$	(S) $\frac{\alpha}{4}\hat{j}$
	(T) $-\frac{3\alpha}{4}\hat{i}$

Which one of the following options is correct ?

(A) I → Q, II → P, III → S, IV → T

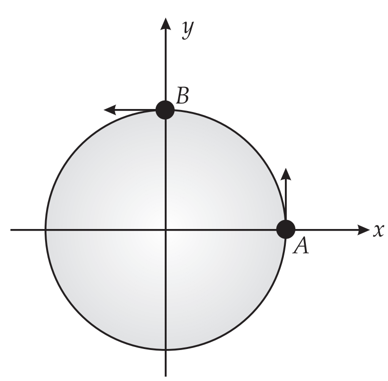
(B) I → S, II → T, III → Q, IV → P

(C) I → Q, II → P, III → S, IV → R

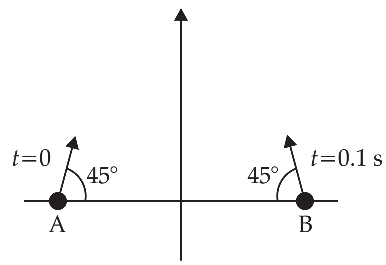
(D) I → T, II → Q, III → P, IV → R

Q 16. List-I describes four systems, each with two particles A and B in relative motion as shown in figures, List-II gives possible magnitudes of their relative velocities (in ms^{-1}) at time $t = \frac{\pi}{3}$ s.

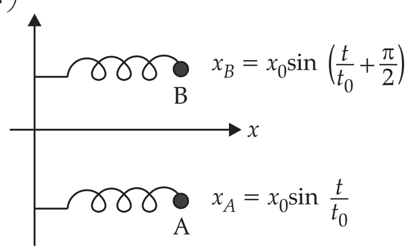
List-I	List-II
(I) A and B are moving on a horizontal circle of radius 1 m with uniform angular speed $\omega = 1$ rad s^{-1}. The inital angular positions of A and B at time $t = 0$ are $\theta = 0$ and $\theta = \frac{\pi}{2}$, respectively.	**(P)** $\frac{\sqrt{3}+1}{2}$



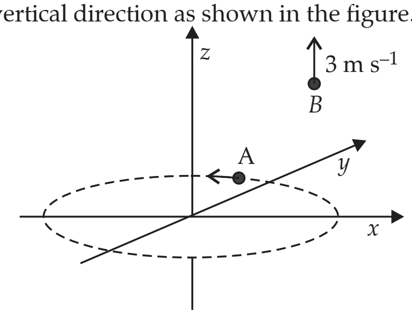
(II) Projectiles A and B are fired (in the same vertical plane) at $t = 0$ and $t = 0.1$ s respectively, with the same speed $v = \frac{5\pi}{\sqrt{2}}$ ms^{-1} and at 45° from the horizontal plane. The initial separation between A and B is large enough so that do not collide ($g = 10$ ms^{-2}). **(Q)** $\frac{(\sqrt{3}-1)}{\sqrt{2}}$



(III) Two harmonic oscillators A and B moving in the x direction according to $x_A = x_0 \sin \frac{t}{t_0}$ and $x_B = \sin\left(\frac{t}{t_0} + \frac{\pi}{2}\right)$ respectively, starting from $t = 0$. Take $x_0 = 1$ m, $t_0 = 1$ s. **(R)** $\sqrt{10}$



(IV) Particle A is rotating in a horizontal circular path of radius 1 m on the xy-plane, with constant angular speed $\omega = 1$ rad s^{-1}. Particle B is moving up at a constant speed 3 ms^{-1} in the vertical direction as shown in the figure. (Ignore gravity.) **(S)** $\sqrt{2}$



(T) $\sqrt{2r\pi^2 + 1}$

Which one of the following options is correct ?

(A) I → R, II → T, III → P, IV → S

(B) I → S, II → P, III → Q, IV → R

(C) I → S, II → T, III → P, IV → R

(D) I → T, II → P, III → R, IV → S

Q 17. List-I describes thermodynamic processes in four different systems. List-II gives the magnitudes (either exactly or as a close approximation) of possible changes in the internal energy of the system due to the process.

	List-I		**List-II**
(I)	10^{-3} kg of water at 100°C is converted to steam at the same temperature, at a pressure of 10^5 Pa. The volume of the system changes from 10^{-6} m^3 to 10^{-3} in the process. Latent heat of water = 2250 kJ/kg.	**(P)**	2 kJ
(II)	0.2 moles of a rigid diatomic ideal gas with volume V at temperature 500 K undergoes an isobaric expansion to volume 3 V. Assume R = 8.0 J mol^{-1} K^{-1}.	**(Q)**	7 kJ
(III)	One mole of a monatomic ideal gas is compressed adiabatically from volume $V = \frac{1}{3}$ m^3 and pressure 2 kPa to volume $\frac{V}{8}$.	**(R)**	4 kJ

(IV)	Three moles of a diatomic ideal gas whose molecules can vibrate, is given 9 kJ of heat and undergoes isobaric expansion.	**(S)**	5 kJ
		(T)	3 kJ

Which one of the following options is correct ?

(A) I → T, II → R, III → S, IV → Q

(B) I → S, II → P, III → T, IV → P

(C) I → P, II → R, III → T, IV → Q

(D) I → Q, II → R, III → S, IV → T

Q 18. List-I contains four combinations of two lenses (1 and 2) whose focal length (in cm) are indicated in the figures. In all cases the object is placed 20 cm from the first lens on the left, and the distance between the two lenses is 5 cm. List-II contains the positions of the final images.

List-I	List-II
(I) 	**(P)** Final image is formed at 7.5 cm on the right side of lens 2.
(II) 	**(Q)** Final image is formed at 60.0 cm on the right side of lens 2.
(III) 	**(R)** Final image if formed at 30.0 cm on the left side of lens 2.
(IV) 	**(S)** Final image is formed at 6.0 cm on the right side of lens 2.
	(T) Final image is formed at 30.0 cm on the right side of lens 2.

Which one of the following options is correct ?

(A) I → P, II → R, III → Q, IV → T

(B) I → Q, II → P, III → T, IV → S

(C) I → P, II → T, III → R, IV → Q

(D) I → T, II → S, III → Q, IV → R

Solutions

SECTION - 1

1. Correct answer is [2.30]

Explanation : Given,

$R_A = R_B = R$, and $M_B = 2M_A$

For star A:

Radius of star (remain) = $R'_A = R_{A/2}$

Mass of star (remain) = $M'_A = \rho A \frac{4\pi}{3}(R')^3 = \frac{M_A}{8}$

By using law of energy conservation

$$\frac{-GM_A^1}{R_A^1} + \frac{1}{2}mv_A{}^2 = 0$$

Hence, $v_A = \sqrt{\frac{2GM_{A'}}{R_{A'}}} = \sqrt{\frac{2GM_A(2)}{8R}} = \sqrt{\frac{-GM_A}{2R}}$

For star B:

Total mass over B = $\frac{7}{8}M_A$

Now new radius of B will be r

$$\frac{4\pi}{3}(r^3 - R_B{}^3)\rho_A = \frac{7}{8}\rho_A\left(\frac{4}{3}\pi R_A{}^3\right)$$

$$\Rightarrow \quad r^3 = \left(\frac{15}{8}\right)R_B{}^3$$

Hence, $$r = \frac{(15)^{1/3}}{2}R$$

$$\frac{v_B{}^2}{2} = \frac{23GM_A}{8\times15^{1/3}.(R/2)}$$

$$v_B = \sqrt{\frac{23GM_A}{2\times15^{1/3}.R}}$$

Now, $$\frac{v_B}{v_A} \sqrt{\frac{23}{15^{1/3}}} = \sqrt{\frac{10n}{15^{1/3}}}$$

Hence, $n = 2.30$

2. Correct answer is [2.32]

Explanation : Given,

$$^{16}_{7}N + {}^{4}_{2}He \rightarrow {}^{1}_{1}H + {}^{19}_{8}O$$

(16.006 u) (4.003 u) (1.008 u) (15.003 u)

From conservation of linear momentum,

$$P_{final} = P_{initial}$$
$$4v_0 = 1v' + 19v' = 20v'$$
$$v_0 = \frac{20v'}{4}$$
$$v' = \frac{4v_0}{20} = \frac{v_0}{5}$$

By using:

$$E = \Delta mc^2$$
$$= (1.008 + 19.003 - 16.006 - 4.003) \times 930$$
$$= 1.86$$

Now,

$$\frac{1}{2}m_1v_1{}^2 - \frac{1}{2}m_2v_2^2 = 1.86$$

$$\frac{1}{2}(4)(v_0{}^2) - \frac{1}{2}(20)\frac{v_0{}^2}{25} = 1.86$$

$$2v_0{}^2 - \frac{2}{5}v_0{}^2 = 1.86$$

$$\frac{8v_0{}^2}{5} = 1.86$$

$$v_0{}^2 = \frac{1.86\times5}{8}$$

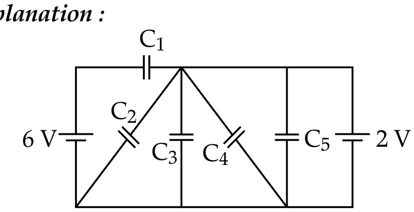
Minimum energy needed (n)

$$n = \frac{1}{2}m_N v_N^2 + \frac{1}{2}M_{He}v_{He}^2$$
$$= \frac{1}{2}(4)(v_0^2)$$
$$= 2v_0{}^2$$
$$= \frac{2\times1.86\times5}{8} = 2.32$$

Hence, $n = 2.32$

3. Correct answer is [8]

Explanation :



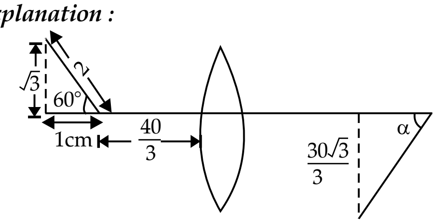
$C_1 = 12\ \mu F$, $C_2 = C_3 = 4\ \mu F$, $C_4 = C_5 = 2\ \mu F$.

From the nodal analysis, potential across C_3 is $(2V - 0) = 2V$

Charge on C_3 is $= C_3(2V)$
$= 4 \times 2$
$= 8\ \mu F$

4. Correct answer is [6]

Explanation :



$$m = \frac{h_i}{h_o} = \frac{v}{u} = \frac{\frac{-30\sqrt{3}}{13}}{\sqrt{3}} = -\frac{v}{\frac{43}{3}}$$

$$\Rightarrow \quad v_1 = \frac{430}{13} \text{ cm}$$

According to lens formula

$$\frac{1}{v} - \frac{1}{u} = \frac{1}{f}$$

$$\frac{1}{v} = \frac{1}{10} - \frac{3}{40}$$

$$v = 40 \text{ cm}$$

Separation $(x) = v - v_1$

$$40 - \frac{430}{13} = \frac{90}{13} \text{ cm}$$

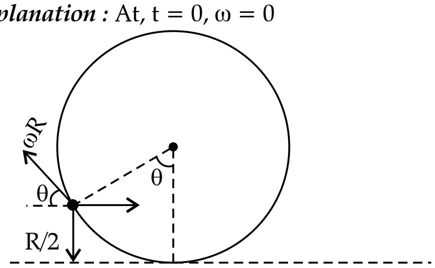
$$\tan\alpha = \frac{\frac{30\sqrt{3}}{13}}{\frac{90}{13}} = \frac{1}{\sqrt{3}}$$

$$\alpha = \frac{\pi}{6} = \frac{\pi}{n}$$

Hence, $n = 6$

5. Correct answer is [0.52]

Explanation : At, t = 0, ω = 0



At, $t = \sqrt{\neq}$, $\omega = \alpha t$

$$= \frac{2}{3}\sqrt{\pi}$$

$$v = r\omega$$

$$= \frac{2}{3}(\sqrt{\pi})(1)$$

$$\theta = \omega_o t + \frac{1}{2}\alpha t^2$$

$$= 0 + \frac{1}{2}\alpha t^2$$

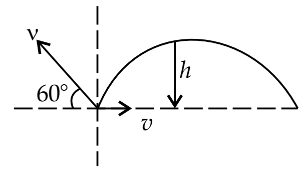
$$= \frac{1}{2}\left(\frac{2}{3} \times \pi\right) = \frac{\pi}{3} \text{ radian}$$

As, $v_y = v\sin\theta$

$$v_y = v\sin 60 = \frac{\sqrt{3}}{2} v$$

$$h = \frac{u_y^2}{2g} = \frac{\frac{3}{4}v^2}{2g}$$

[By using III equation of motion]



$$h = \frac{\frac{3}{4} \times \frac{4}{9}\pi}{2g}$$

$$h = \frac{3\pi}{9 \times 2g} = \frac{\pi}{6g}$$

Maximum height from plane will be given by

$$H = h + \frac{R}{2}$$

$$H = \frac{\pi}{6 \times 10} + \frac{1}{2}$$

$$= \frac{3.14}{60} + \frac{1}{2}$$

By comparing with given height we get,

$$x = \frac{3.14}{6} = 0.52$$

Hence, $h = 0.52$ m

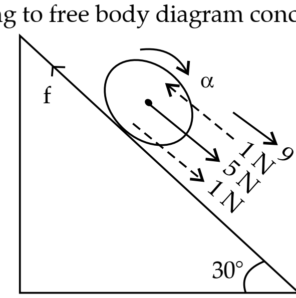
6. Correct answer is [2.86]

Explanation :

$$I_s = \frac{2}{5} Mr^2$$

Given, M = 1 kg, $r = 0.5$ m

According to free body diagram concept



$$5 - 1 + 1 - f = 1(a)$$

$$5 - f = a \qquad \text{....(i)}$$

Now due to rotation:

Net torque = Iα {About the centre of mass}

$$f \times -2(1 \times 0.5) = \frac{2}{5} Mr(\alpha) \qquad (\because a = r\alpha)$$

$$f - 1 = \frac{2}{5} a$$

$$f - 1 = \frac{2}{5} a$$

$$f = 1 + \frac{2}{5}a \quad ...(ii)$$

By using equation (i) & (ii)

$$5 - a = 1 + \frac{2}{5}a$$

$$4 = 1 + \frac{2}{5}a + a$$

$$a = \frac{20}{7} = 2.857$$

Hence, $a = 2.86 \text{ m/s}^2$

7. Correct answer is [4]

Explanation : Energy stored in capacitor and inductor are same and maximum.

Hence, $\frac{q_0^2}{2C} = \frac{1}{2}LI_m^2$

$$\frac{q_0^2}{CL} = I_m^2$$

$$I_m = \frac{q_0}{\sqrt{LC}} = \frac{CV}{\sqrt{LC}}$$

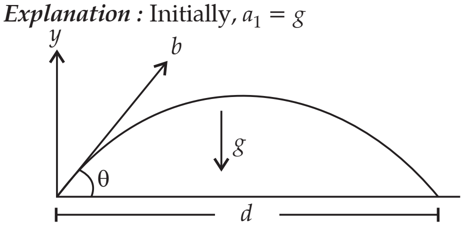
$$I_m = \sqrt{\frac{C}{L}} \times V = \sqrt{\frac{10^{-3}}{0.1}} \times 0.04$$

$$I_m = I_o = I_{max} = 0.004$$

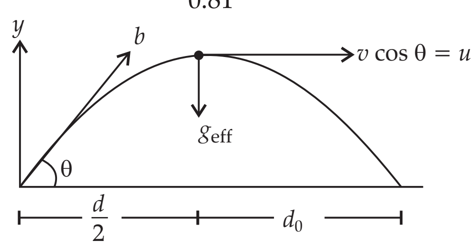
Hence, $I_m = 4 \text{ mA}$

8. Correct answer is [0.95]

Explanation : Initially, $a_1 = g$



Finally, $a_2 = g' = \frac{g}{0.81}$



$$\text{Range} = d = \frac{v^2 \sin 2\theta}{g}$$

$$H_{max} = \frac{v^2 \sin 2\theta}{2g}$$

$$\frac{1}{2}g_{eff}t^2 = H_{max}$$

$$t = \sqrt{\frac{2H_{max}}{g_{eff}}}$$

$$t = \sqrt{\frac{v^2 \sin 2\theta}{g^2} \times 0.81}$$

$$t = \left(\frac{0.9v \sin\theta}{g}\right)$$

Now, $d' = \frac{d}{2} + d_0$ ...(i)

$d_0 = v \cos\theta \times t$ ...(ii)

$$= v\cos\theta\left(\frac{0.9v\sin\theta}{g}\right)$$

$$= \frac{0.9v^2 \sin\theta\cos\theta}{g}$$

Using (i) & (ii)

$$d' = \frac{v^2 \sin 2\theta}{2g} + \frac{0.9v^2 \sin\theta \cos\theta \times 2}{g \times 2}$$

$$= \frac{v^2 \sin 2\theta}{2g}(1 + 0.9)$$

$$= \frac{v^2 \sin 2\theta}{2g}(1.9) \qquad (\text{As } d' = nd)$$

$$= d\left(\frac{1.9}{2}\right)$$

$$d' = 0.95d$$

Hence, $n = 0.95$

SECTION - 2

9. Correct answer is option [B].

Explanation :

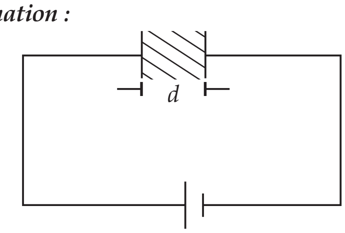


Figure (a)

Here, $E_0 = \frac{V}{d}$ and $C_0 = \frac{\varepsilon_0 AK}{d}$

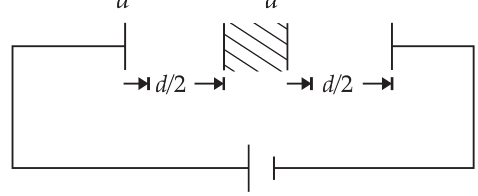

Figure (b)

Here, $C^1 = \dfrac{\varepsilon_0 A}{d - t + \dfrac{t}{K}}$

$= \dfrac{\varepsilon_0 A}{2d - d + \dfrac{d}{K}}$

$= \dfrac{\varepsilon_0 A}{d + \dfrac{d}{K}}$

$C' = \dfrac{\varepsilon_0 A}{d\left(1 + \dfrac{1}{K}\right)}$

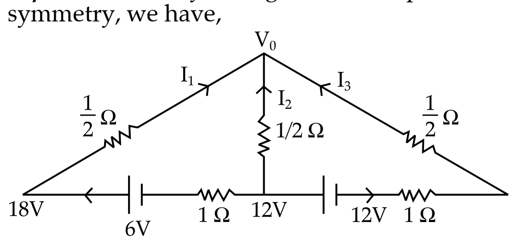
$C' = \dfrac{\varepsilon_0 AK}{d(K+1)}$

$C' = \dfrac{C_0}{K+1}$

Hence, The capacitance is decreased by a factor of $\dfrac{1}{1+K}$.

10. Correct answer is options [A, B, C & D].

Explanation : By using the concept of folding symmetry, we have,



By using KCL

$i_1 + i_2 + i_3 = 0$

$\dfrac{18 - V_0}{3/2} + \dfrac{12 - V_0}{1/2} + \dfrac{0 - V_0}{3/2} = 0$

$54 = 5V_0$

$V_0 = \dfrac{54}{5}$ volt

And also

$\dfrac{18 - V'}{1} + \dfrac{2\left(\dfrac{54}{5} - V'\right)}{1} = 0$

$3V' = 18 + \dfrac{108}{5}$

$V' = \dfrac{66}{5}$ V

$I_1 = \dfrac{36}{5} = 7.2$ A

$I_2 = \dfrac{6}{5} = 1.2$ A

$I_3 = \dfrac{24}{5} = 4.8$ A

$I_5 = \dfrac{12}{5} = 2.4$ A

11. Correct answer is option [B]

Explanation : Given, g = 10 m/s^2 : $\gamma = 2$

As per Adiabatic condition

$P_1^{1-\gamma}.T^{\gamma} = P_2^{1-\gamma}.T^{\gamma}$ = Constant

$\dfrac{P_2}{P_1} = \left(\dfrac{T_1}{T_2}\right)^{\gamma/1-\gamma}$

$P_2 = \left(\dfrac{300}{150}\right)^{2-1} \times 600$

$P_2 = \dfrac{600}{4} = 150$ Pa

Now: $\dfrac{dm}{dt} = \rho.A_1 v_1 = 0.8$ kg/s

Hence, $v_1 = \dfrac{0.8}{0.2 \times 0.1} = 40$ m/s

As we know

$P = \dfrac{\rho RT}{M} \Rightarrow \rho \times \dfrac{P}{T}$

$\dfrac{\rho_1}{\rho_2} = \dfrac{P_1}{P_2} . \dfrac{T_2}{T_1} = \dfrac{1}{2}$

$\rho_2 = 2\rho_1$

Work done on the gas = total energy

= ΔK + ΔU + internal energy

$P_1 A_1 \Delta x_1 - P_2 A_2 \Delta x_2 = \dfrac{1}{2}\Delta m v_2^2 - \dfrac{1}{2}\Delta m v_1^2 + \Delta mgh + \dfrac{f}{2}$

$(P_2\Delta V_2 - P_1 \Delta V_1)\ 2P_1 \dfrac{\Delta v_1}{\Delta m} - 2P_2 \dfrac{\Delta v_2}{\Delta m} = \dfrac{v_2^2 - v_1^2}{2} + gh$

$\dfrac{2 \times 600}{0.2} - \dfrac{2 \times 150}{0.1} = \dfrac{20^2 - 40^2}{2} + 10h$

$6000 - 3000 = \dfrac{400 - 1600}{2} + 10h$

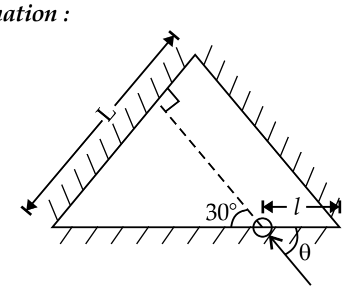
$3000 = -600 + 10h$

$10h = 3000 + 600$

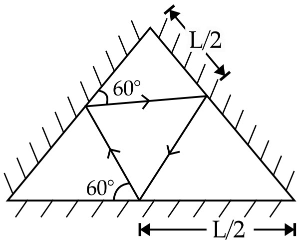
$h = 360$ m

12. Correct answer is options [A & B].

Explanation :



Ray will come out after one reflection for $\theta = 30°$ and $0 < l < L$

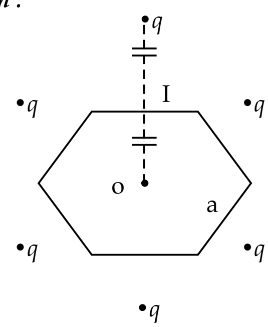


If $\theta = 60°$: $l = \dfrac{L}{2}$

Ray will come out after two reflections.

13. Correct answer is options [A, B & C].

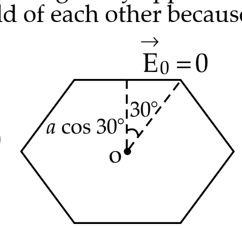
Explanation :



(A) Diagonally opp. elements cancels out the electric field of each other because of symmetry of charges.

$\therefore \quad \vec{E}_0 = 0$

(B)



$$E_{net} \; \frac{2q \times 4}{4\pi\varepsilon_0 . 4.3a^2}$$

$$E_{net} = \frac{q}{6\pi\varepsilon_0 a^2}$$

(C) As, $\quad V = \dfrac{Kq}{r}$

So here for the combination

$$V = \frac{7Kq}{2d} = \frac{7q}{4\pi\varepsilon_0(\sqrt{3}a)}$$

$$V = \frac{7q}{4\sqrt{3}\pi\varepsilon_0 a}$$

14. Correct answers is options [A, B & D].

Explanation : Electrostatic potential energy = $E_P - E_N$

Required binding energy $= Z \times \dfrac{1}{4\pi\varepsilon_0} \dfrac{(Z-1)e^2}{R}$

As: $\quad R = R_0 A^{1/3}$

$$= \frac{Z}{4\pi\varepsilon_0} \frac{(Z-1)e^2}{R_0 A^{1/3}}$$

Conclusion, Binding energy of proton increases if the nucleus undergoes a beta decay emitting a positron.

SECTION - 3

15. Correct answer is option [C].

(I) $\quad B = \dfrac{\mu_0 mI}{\sqrt{2}}(\sin\omega t\hat{j} + \cos\omega t\hat{k})$

$$\phi = \vec{B}\vec{A}$$

$$= \frac{\mu_0 mR}{\sqrt{2}} \cos(\omega t).A$$

$$e = \frac{d\phi}{dt} = \frac{\mu_0 mI\omega A}{\sqrt{2}} \sin\omega t$$

$$i = \frac{e}{R} = \frac{\mu_0 mI\omega A^2}{\sqrt{2}R} \sin\omega t$$

As, $\vec{M} = i\vec{A}$

$$= iA(\hat{K}) = \frac{\mu_0 mI\omega A^2}{\sqrt{2}R} \sin(\omega t)\hat{k}$$

$$\vec{\tau} = \vec{M} \times \vec{B}$$

$$= \frac{\mu_0 m^2 I^2 \omega A^2}{\sqrt{2}R} \sin^2 \omega t(-\hat{i})$$

$$\vec{\tau} = -\frac{\alpha}{4}\hat{i}$$

(II) $\quad \vec{B} = \dfrac{\mu_0 mI}{\sqrt{2}}(\sin\omega t\hat{i} + \cos\omega t\hat{j})$

$\phi = 0 \,;\, e = 0 \,;\, i = 0 \,;\, t = 0$

(III) $\quad \vec{B} = \dfrac{\mu_0 mI}{\sqrt{2}}(\sin\omega t\hat{i} + \cos\omega t\hat{k})$

$$\phi = \vec{B}.\vec{A}$$

$$= \frac{\mu_0 mI}{\sqrt{2}} \cos\omega t.A$$

$$e = -\frac{d\phi}{dt} = \frac{\mu_0 mI\omega A}{\sqrt{2}} \sin\omega t$$

$$i = \frac{e}{R} = \frac{\mu_0 mI\omega A}{\sqrt{2}R} \sin\omega t$$

$$\vec{M} = i \times \vec{A}$$

$$\vec{\tau} = \vec{M} \times \vec{B} = \frac{\mu_0 m^2 I^2 \omega A^2}{\sqrt{2}R} \sin^2 \omega t(\hat{j})$$

$$= \frac{\alpha}{4}\hat{j}$$

(IV)
$$\vec{\tau} = \vec{M}\times\vec{B}$$
$$= i\vec{A}\times\vec{B}$$
$$= \frac{e}{R}(\vec{A}\times\vec{B})$$
$$= -\frac{d\phi}{dt}\left(\frac{\vec{A}\times\vec{B}}{R}\right)$$
$$= \frac{1}{R}\left[A\hat{k}\times\frac{\mu_0 mF}{\sqrt{2}}(\cos\omega t\hat{j}+\sin\omega t\hat{k})\right]$$
$$= \frac{3}{4}\alpha\hat{i}$$

16. Correct answer is [C].

Explanation : **(I)** Resultant velocity

$$v_{AB}^2 = v_A^2 + v_B^2 - 2v_{AB}\cos\theta$$
$$\omega_A = \omega_B,\ \theta = 90°$$
$$v_A = v_B = 1 \text{ m/s}$$
$$v_{BA} = v_{BA} = \sqrt{2} \text{ m/s}$$

(II)
$$\vec{v}_A = \frac{5\pi}{2}\hat{i} + \frac{5\pi}{2}\hat{j}$$
$$\vec{v}_A = \frac{5\pi}{2}\hat{i} + \left(\frac{5\pi}{2} - \frac{10\pi}{3}\right)\hat{j}$$
$$= \frac{5\pi}{2}\hat{i} - \frac{5\pi}{6}\hat{j}$$
$$\vec{v}_B = -\frac{5\pi}{2}\hat{i} + \frac{5\pi}{2}\hat{j}$$
$$= -\frac{5\pi}{2}\hat{i} - \left(\frac{5\pi}{2}+1\right)\hat{j}$$
$$v_{BA} = -5\pi\hat{i} - \hat{j}$$
$$v_{BA} = \sqrt{25\pi^2+1}$$

(III) If $x_A = \sin t$, then $v_A = \cos t = \frac{1}{2}$ m/s

If $x_B = \cos t$, then $v_B = -\sin t = -\frac{\sqrt{3}}{2}$ m/s

$$v_{BA} = -\left(\frac{\sqrt{3}+1}{2}\right) \text{m/s}$$
$$v_{AB} = \frac{1}{2} - \left(-\frac{\sqrt{3}}{2}\right) = \frac{1+\sqrt{3}}{2} \text{ m/s}$$

(IV) $\vec{v}_A$ and $\vec{v}_B$ are perpendicular

$$|\vec{v}_{BA}| = \sqrt{v_A^2 + v_B^2}$$
$$= \sqrt{10} \text{ m/s}$$

17. Correct answer is [C].

Explanation : **(I) According to work-energy theorem**

$$\Delta U = \Delta Q - \Delta W$$
$$= \left((10^{-3}\times 2250) - \frac{10^5(10^{-3}-10^{-6})}{10^3}\text{kJ}\right)$$
$$\Delta U = 2.1501 \text{ kJ}$$

(II)
$$\Delta U = nC_V DT$$
$$= \frac{5}{2}nR\Delta T$$
$$= \frac{5}{2}(0.2)(8)(1500-500) \text{ J}$$
$$= 4 \text{ kJ}$$

(III)
$$P_1V_1^\gamma = P_2V_2^\gamma$$
$$2\left(\frac{1}{3}\right)^{5/3} = P_2\left(\frac{1}{24}\right)^{5/3}$$
$$P_2 = 64 \text{ kPa}$$
$$\Delta U = nC_v\Delta T = \frac{3}{2}(P_2V_2 - P_1V_1)$$
$$= \frac{3}{2}\left(64\times\frac{1}{24} - 2\times\frac{1}{3}\right)\text{kJ}$$
$$= 3 \text{ kJ}$$

(IV)
$$\Delta U = nC_V\Delta T$$
$$= n.\frac{7}{2}R\Delta T$$
$$= 7 \text{ kJ}$$

18. Correct answer is option [A].

Explanation :

(I)
$$v_1 = \frac{uf}{u+f} = \frac{-20(10)}{-20+10} = 20\text{cm}$$
$$u_2 = 15$$
$$v_2 = \frac{15\times15}{15+15} = 7.5\text{cm}$$

(II) $v_1 = 20$; $u_2 = 15$
$$v_2 = \frac{15(-10)}{15+(-10)} = -30\text{cm}$$

(III)
$$\left.v_1 = 20;\ u_2 = 15\right\} V_2 = \frac{15(-20)}{15+(-20)} = 60\text{cm}$$

(IV)
$$v_1 = \frac{(-20)(-20)}{-20+(-20)} = -10\text{cm}$$
$$u_2 = -15 \text{ cm}$$
$$v_2 = \frac{-15\times10}{-15+10} = 30\text{cm}$$
